Building A Local Sustainable Future

SharedSolarCA is dedicated to providing all Californians with access to green, renewable solar power and to help advance the global fight against climate change.

Our goal is to support communities and businesses in achieving their corporate sustainability goals through access to local, clean, renewable solar energy.

Community Renewables From The Grid

Are solar roof top panels not an option? Our Community Solar offering enables end users to enjoy the benefits of solar energy – without the need for onsite installation. We carefully develop our solar farms in accordance with the highest environmental standards. And we use the latest technology to guaranty the smallest footprint within communities, allowing customers to take advantage of dependable, renewable solar power in the form of utility bill credits.

No Obligation Support

Sign up today for your no cost, no obligation opportunity to support SharedSolarCA's Community Solar offering in your community. This action let's your local utility know you support access to local, community solar farms while being a good steward of the environment. Just complete the attached no obligation Expression of Interest form. It just requires general information from your utility bill, and it takes less than a minute to complete.

1. Clean Energy Produced
Where it Makes Most Sense

2. Delivered to Your Utility

3. Credited to Your Electric
Bill

How Community Renewables Works

SharedSolarCA installs and maintains its strategically located solar farms that supply power to your local utility. Based on your current energy needs you become a participant in the solar farm by signing up with us. We deliver electricity from the solar farm to your utility. Your utility will then issue credits on your power bill for participating in the program. You benefit from energy generated by a dependable, renewable, and sustainable power source in your community.

Enjoy The Benefits of Renewable Energy Without The Hassle of On-Site Location

Panel Free Roofs: You can have access to renewable energy without having a solar system installed on your roof, eliminating the worries for damages, maintenance, performance, and overall appearance.

Maintenance Free: With no solar system mounted on your roof, there is zero maintenance required.

Optimal Solar Production: We find the most favorable location for optimal solar production to ensure we deliver reliable, green energy to our customers.
